

## Client: Quicksilva

Healthcare Software Company

### Background:

- The client had previously submitted R&D Tax Credit claims via its accountants but was concerned that, due to the complexity of the legislation, it might not be fully compliant.

### Why MSC R&D was chosen as the client's partner:

- MSC R&D had an existing relationship with the client through its grant work and the client recognised MSC R&D's technical expertise and understanding of its particular market.
- MSC R&D ran a R&D Tax Review day with the client where MSC R&D's tax specialist was able to identify a significant value of under claims and some over claims due to errors.
- MSC R&D engaged with the client to work on an uplift basis, with its fees based solely on the value of any incremental claim that would be made.

### The MSC R&D Solution:

- A MSC R&D team of two experts (Technical and Financial) spent a day with the client identifying eligible projects with the technical team and accessing relevant financial data.
- A detailed report was subsequently prepared for the client to submit to the HMRC as supporting documentation for its revised claim.

### Benefits:

- The client received an additional £75,000 tax offset.
- The client was fully compliant in the event of an HMRC audit, with robust supporting documentation.
- The MSC R&D process minimised the client's time and risk.

"MSC R&D's experience means that they quickly established what we should have claimed, giving us the peace of mind that any errors had been corrected. We will be using them for future claims."
