

## Client: Star Computers

Enterprise Software Company

### Background:

- The client had not previously submitted R&D Tax Credit claims as it was sceptical as to whether it was eligible and concerned about the complexity of the legislation.

### Why MSC R&D was chosen as the client's partner:

- MSC R&D contacted the client and demonstrated its track record in preparing successful R&D Tax Relief claims for similar companies.
- The client engaged with MSC R&D to prepare its submission to the HMRC based on MSC R&D's fast-track process and 100% contingency fees, minimising their risk, time and cost.
- MSC R&D's fast-track Blitz process minimised the time of the client to one day, ensuring minimum disruption to the day to day business.

### The MSC R&D Solution:

- A MSC R&D team of two experts (Technical and Financial) spent a day with the client identifying the eligible projects with the technical team and accessing relevant financial data.
- A detailed report was subsequently prepared for the client to submit to the HMRC as supporting documentation for its claim.

### Benefits:

- The client received a £179,000 tax refund.
- The client was fully compliant in the event of a HMRC audit, with robust supporting documentation.
- The MSC R&D process minimised the client's time and risk.

"MSC R&D's deep understanding of the R&D Tax Credit scheme ensured we were able to maximise our claim with total confidence that we were in compliance with the HMRC rules. Ever changing rules and regulations mean we will continue to receive value from using MSC R&D for all future claims."
