ABOUT NICK

Nick is a graduate engineer who joined MSC in 2008 and has since applied his technical expertise to over 150 successful R&D tax credits claims.

His early career spanned automotive plant engineering with Leyland Trucks, research equipment design, and teaching undergraduate engineering at Oxford University. After completing a Masters in Computer Integrated Manufacture at Cranfield University, Nick transitioned into the IT industry, working first in manufacturing systems with Scott Paper Company and then spent fifteen years with W.R. Grace, a \$2bn US multinational speciality chemicals company, eventually as Global IT Director managing a team of over 70 worldwide staff. He subsequently founded Adaptive Wireless Solutions Ltd in late 2004, specialising in high technology wireless monitoring and control solutions for a wide range of businesses and applications.

Nick's varied career and experience means he can bring insight and understanding to maximise client claim value in a wide range of sectors. These include light and heavy manufacturing with a full range of manufacturing process types, batch and process chemicals, life-sciences, food processing, electronics and controls engineering, software development, primary utilities, building automation and controls, energy monitoring and data centres.
