ABOUT MARK

Mark has eight years of experience in R&D tax relief and has worked on hundreds of claims across a diverse range of industries, including motorsport, defence, architecture, marine, Hypercars, bioscience, space, medical & environmental. He has claimed for advanced science & technologies, engineering, and manufacturing in a multitude of sectors.

His experience includes projects involving advanced engine technologies for large shipping vessels, classified space-sector technologies, new medicines, propulsion systems, listed building architectural works, defence manufacturing processes, motorsport and Hypercar electronics, innovative insulation products, and environmental remediation solutions.

Before moving into R&D tax relief, Mark spent more than thirty years in the private sector including over a decade as an IT business owner and as an entrepreneur, analysing, and diagnosing technological problems and coming up with possible solutions both himself and in combination with technical guidance, trialling until a successful resolution was achieved. This experience has taught him the various methodologies of problem solving, appreciating the complexities and how best to implement solutions. His previous, non-R&D, roles have involved a wide variety of sectors including premium automotive manufacturers, internet providers, city financial institutes, and technology-based businesses, gaining first-hand experience of the challenges involved in new technologies and software and the processes and works behind them.
